INCLUSIVE TALENT NAVIGATOR

Product Requirement Document (PRD)
Skills-Based Internal Mobility & Fair Career Progression

Event: SAP Hackfest 2026 — Grand Finale (4 November 2026)
Location: New Horizon College of Engineering (NHCE), Bengaluru
Theme: Theme 2: Inclusive Workforce
Institution: Ramaiah University [Accredited A+]
Stack Baseline: Native SAP Cloud Ecosystem (SAP Build, SAP AI Core)

1. Executive Summary & Vision

The **Inclusive Talent Navigator** is an enterprise-grade internal mobility platform designed to decouple career progression from managerial bias and informal networks. By shifting from pedigree and tenure-based tracking to an automated, skills-first evaluation matrix, the platform ensures equitable lateral and vertical growth for enterprise tech talent. The solution addresses critical retention leakage in the Indian tech sector, maximizing internal capacity while actively auditing promotional fairness to build a highly diverse workforce.

2. Core User Personas

Persona A: The Employee (Ananya Rao)

- **Demographics:** 28 years old, Software Engineer with a 4-year tenure at a large enterprise.
- **Core Goal:** Seeks transparent, fair visibility into internal lateral growth, micro-gigs, and engineering promotions without relying on localized managerial advocacy or arbitrary network loops.
- **Primary Pain Point:** Structural career stagnation; lack of explicit corporate mapping showing how her engineering capabilities align with open roles in adjacent departments.

Persona B: The HR Business Partner (Rahul Mehta)

- **Demographics:** 38 years old, Lead HRBP overseeing high-scale engineering business units.
- **Core Goal:** Maximize engineering retention rates, lower external recruitment cycles, and ensure organizational promotions adhere strictly to DE&I; metrics.
- **Primary Pain Point:** Massive replacement costs for technical talent; lack of transparent, real-time data to verify or disprove equity issues in internal promotional velocity.

3. System Architecture & Platform Ecosystem

The platform is built to fit natively into the SAP framework, allowing enterprise teams to extend their existing HR infrastructure with data security and platform integrity.

Layer Component	Official SAP Ecosystem Tool	Implementation Role
Frontend UI Layer	SAP Build Apps (Horizon Theme)	Assembles the dashboard interfaces for both employee and HRBP roles with zero-code visual compliance.

Orchestration Backend	SAP Build Process Automation	Coordinates data flows, steps through active agent states, and hosts the Human-in-the-Loop review gates.
Intelligence Layer	SAP AI Core / Generative AI Hub	Executes multi-agent prompting scripts securely routed to frontier LLMs via corporate proxies.
Enterprise Storage	SAP Datasphere / SAP BTP Hana Cloud	Maintains structured schemas matching SAP SuccessFactors OData employee metadata entities.

4. Multi-Agent Functional Specifications

The core operations layer relies on four specialized enterprise agents working in sequence, anchored by a strict validation flow:

1. Skills Discovery Agent

Ingests unformatted text data (resumes, engineering logs, performance reviews) and parses them into standardized capability profiles, returning clean structured lists separating technical stacks, domain background, and soft skills.

2. Opportunity Matching Agent

Maps the output skill profiles against internal open mandates and corporate projects. Utilizes semantic mapping patterns rather than basic rigid keywords to uncover hidden capabilities.

3. Fairness Review Agent

Acts as an automated governance gate. Evaluates proposed matches against historical team metrics to isolate irregularities in career movement velocity, flagging high-risk equity anomalies directly to governance channels.

4. Career Development Agent

Identifies capability deficits between an employee's baseline and a targeted role, auto-generating localized milestone guides including course selections and micro-project assignments.

The Core Workflow: Human-in-the-Loop

To ensure safety, no career transitions or promotions are automated. Matches and fairness alerts are piped directly to **Rahul Mehta's** inbox inside the system, requiring explicit human validation and authorization before execution.

5. Monetization & Business Model (B2B SaaS)

Subscription Tier	Pricing Model	Included Feature Capabilities
Growth Tier	Per Employee Per Month (PEPM)	Baseline capability tracking and manual profile registers for localized operations.
Mid-Market Tier	Per Employee Per Month (PEPM)	Unlocks semantic internal matching networks and automated career roadmap generation.
Enterprise Tier	Per Employee Per Month (PEPM)	Full access to the 4-agent ecosystem, continuous compliance auditing, and custom integration parameters.

Implementation Monetization Add-ons:

- **Enterprise Integration:** Bespoke professional service billing for linking legacy enterprise resource planning logs.
- **Onboarding Frameworks:** Specialized corporate bootcamps for HR training deployment.
- **Compliance Extractions:** Standalone premium data exports for independent equity auditing.
